Re:5 Docket No. 98N-1038-35  
Irradiation in production  
processing and handling  
of food.

I urge retention of the label stating "this food has been treated by irradiation" as well as carrying the radura, the international symbol. There is a vast difference between irradiation and cold pasteurization, the suggested new label. Irradiation kills vitamins and creates a new class of URPS (radiolytic products that have not been tested.) Truth labeling must be retained. Thank you for involving the consumer in this important issue.

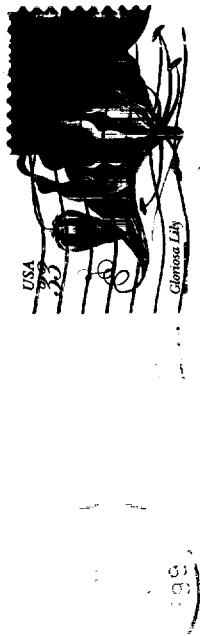

Sincerely,

Yoshiko Ikuta
